Overview Other compressor phenomena Head Coefficient vs. non-dimensional flow rate Pressure rise vs. flow rate Loading coefficient/pressure coefficient vs. flow coefficient Surging Stalling Following are some other characteristics of the compressor Choking is the condition which occurs in the compressor in which it operates at very high mass flow rate and flow through the compressor can't be further increased as mach number at some part of the compressor reach to unity i.e. to sonic velocity and the flow is said to be choked. In compressor maximum volume flow rate is limited by cross-section at the inlet. This condition ca...
