Why is spiral flush a good option for DTH drilling?

This, in turn, can cause damage to nearby structures. As a result, the use of conventional DTH drilling is limited already in several city centers, shorelines and other sensitive areas around the world. Mincon's patented solution, Spiral Flush, eliminates the risk of air escaping into the overburden.

What is spiral flush drilling?

Spiral Flush makes drilling in sensitive and complex ground conditions safe by not directing airflow against the ground. This technology has been successfully used in locations around the world where other conventional DTH drilling methods have not been possible.

What is a spiral flush mini?

Originally developed for Nordic well-drilling applications, the patent pending invention Spiral Flush Mini now offers the safety of the regular Spiral Flush in a much smaller scale. The airflow flushing the face of the pilot is reduced to absolute minimum which makes drilling small holes much safer in sensitive ground conditions.
